Oceans

Taking the Internet of Things Underwater

“More than 80% of ocean remains unobserved and unexplored.”

- NOAA, 2018

Less than 1 in a million of IoT is underwater, even though oceans cover more than 70% of the planet

Aquaculture is the “fastest growing food sector”

- UN Food & Ag org, 2010

Problem: Battery life of underwater sensors is extremely limited

Low-power underwater transmitters consume 10s-100s of Watts and cannot be recharged easily

Most state-of-the-art sensors for tracking marine animals only last for few hours or days

[Animal Biotelemetry'15, Scientific Reports'17]

Technology that Enables Underwater Backscatter (**Batteryless**) Networking

*Published in: ACM SIGCOMM'19, ACM SIGCOMM'20,
MTS/IEEE OCEANS'20, ACM HotNets'20*

Traditional Approach

Sensor generates its own acoustic signal

Our Technology

Sensor reflects an existing acoustic signal

How can we control the reflections of
acoustic signals?

Key Idea: Use piezoelectricity to design programmable acoustic reflectors

Piezoelectric materials transform mechanical to electrical energy

Key Idea: Use piezoelectricity to design programmable acoustic reflectors

Piezoelectric materials transform mechanical to electrical energy

Key Idea: Use piezoelectricity to design programmable acoustic reflectors

Piezoelectric materials transform mechanical to electrical energy

Piezo-Acoustic Backscatter

Our sensor needs 1 million times less power (~100s microWatt) than standard underwater modems

And it harvests energy in non-reflective (absorptive) state
→ battery-free

incoming
signal

Can't vibrate

Hydrophone
receiver

Projector
(speaker)

LED

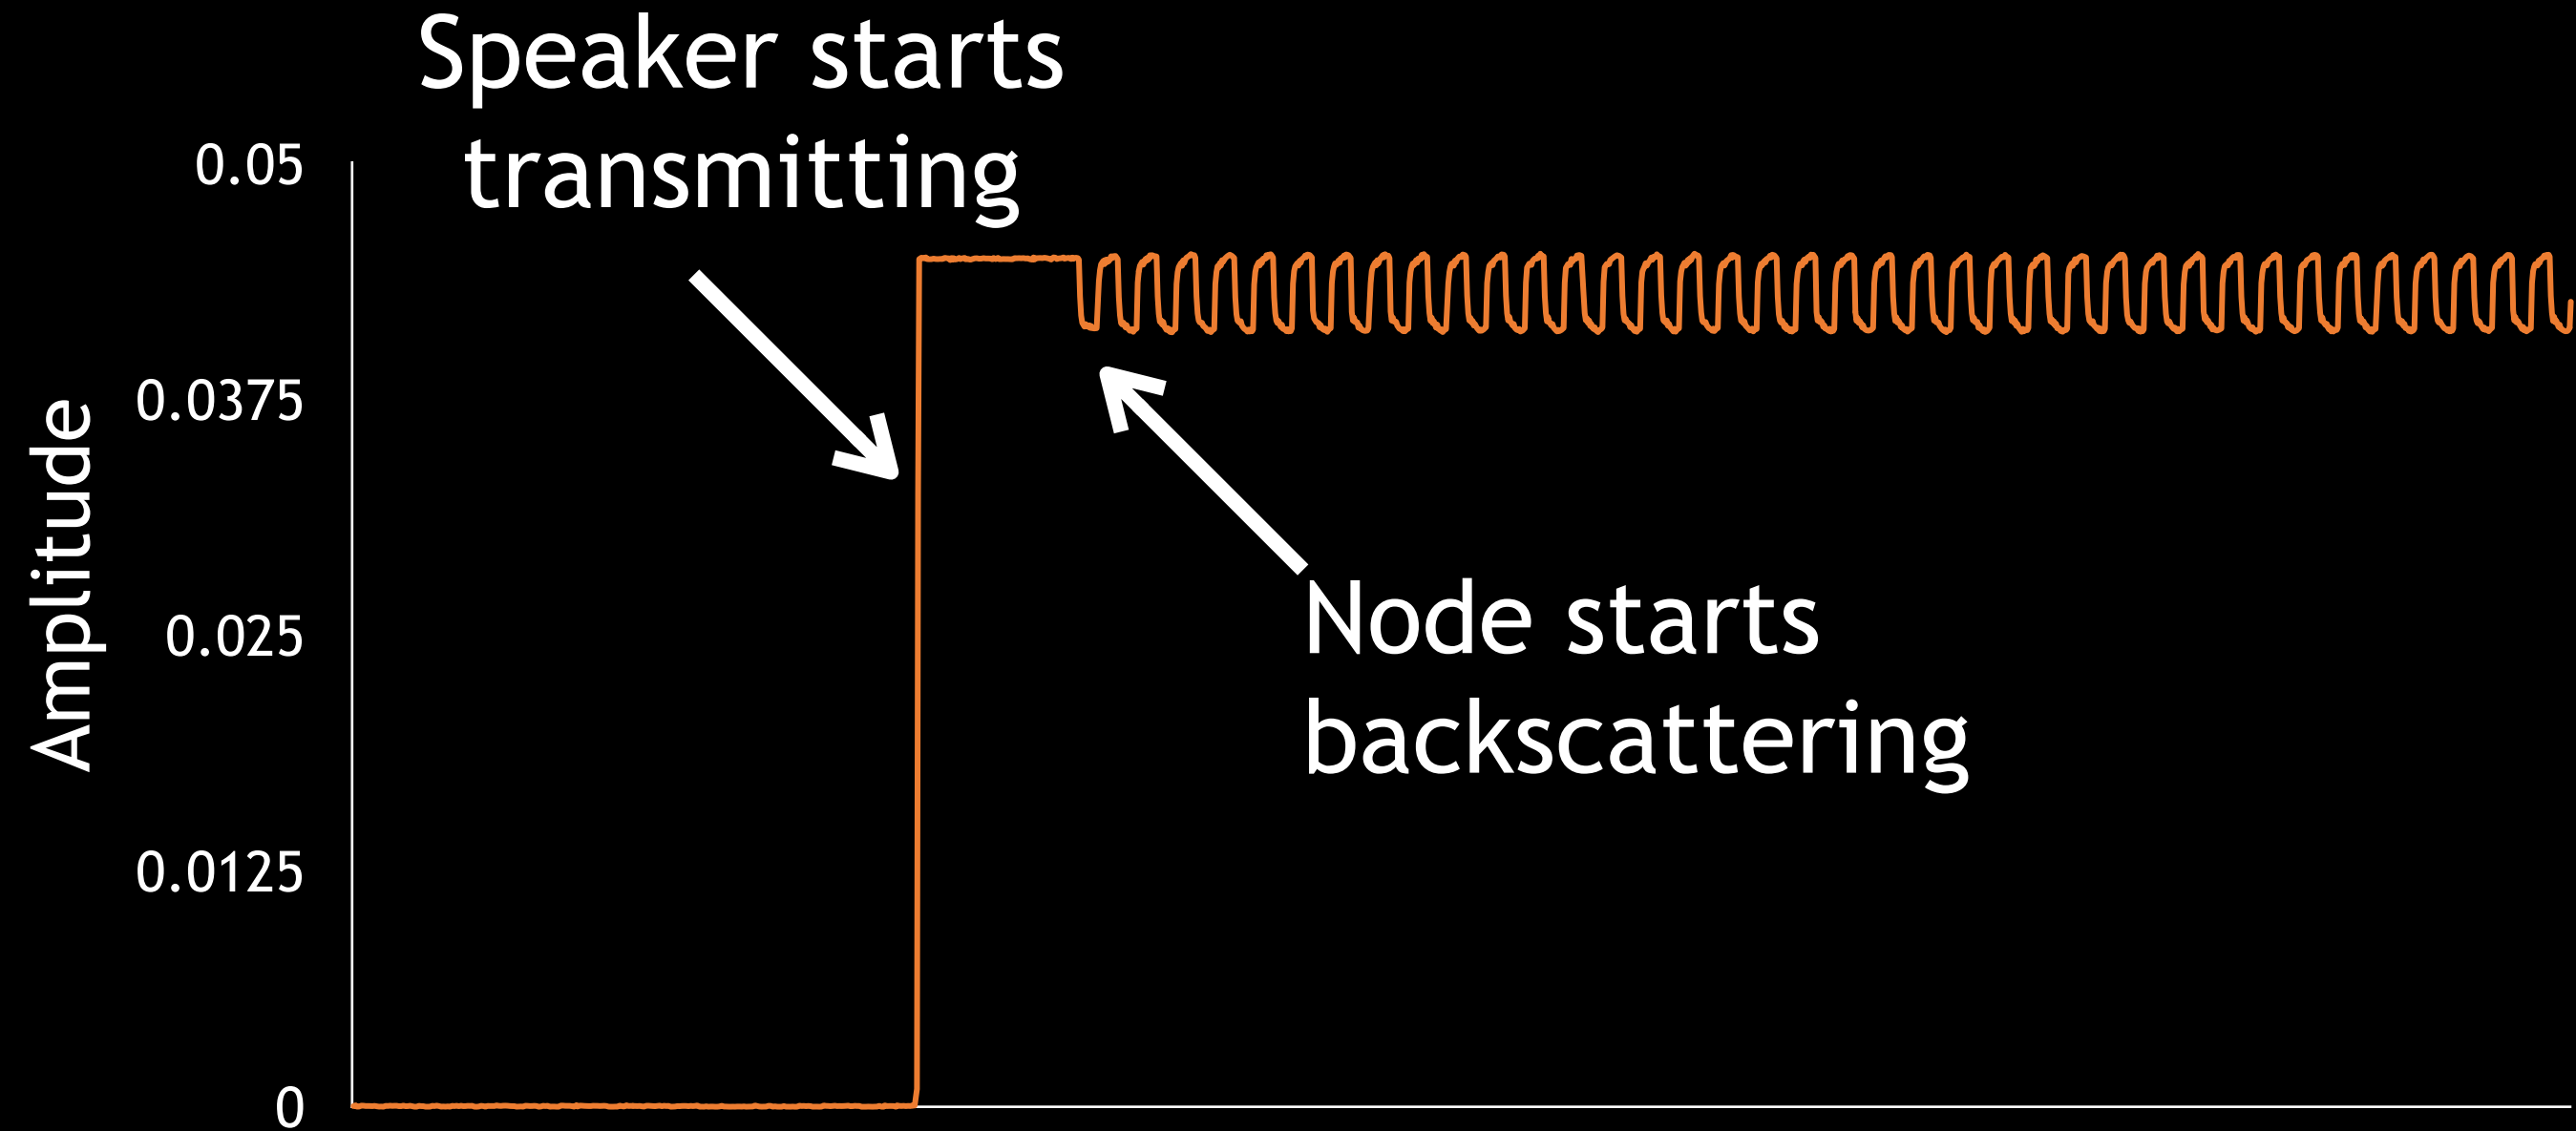

batteryless
PAB sensor

connected
to circuit

Large Experimental Pool

Measuring the Backscatter Signal (by Hydrophone)

Algorithms and techniques to scale to many nodes and deal with other reflections in the environment

Hardware for energy
harvesting, bi-directional
communication, sensor

Fabricated & 3D printed
(omnidirectional) transducer

Costs ~\$100. Consumes 100 of micro-Watts, i.e., 1 million times less
power than state-of-the-art low-power underwater modems

Experimental Evaluation in River (with snow & rain)

- 500+ experimental trials at different ranges, throughputs, and number of nodes
- Throughput: 20kbps
- Range: 62m
- Concurrent nodes: 10
 - *before spatial reuse*
- Localization accuracy: centimeter-scale

PAB with temp &
pressure sensor

Saturn's moon
Titan

Technology highlighted as an *ocean-shot* for this decade (2021-2030)
by the US National Academies Committee on Ocean Sciences

Opportunities & Open Problems

(1) IoT → Data → Climate modeling

Apps: Weather prediction, flooding/disaster, climate modeling, coral reefs

(2) Underwater drone localization & navigation

Apps: Mapping, mining, multi-modal navigation, awareness, defense

(3) Architectural developments

Apps: Networking, simulations, range, energy, materials

**POPULAR
SCIENCE**

TECHNOLOGY

Why Did I Implant A Chip In My Hand?

My so-called cyborg life

**My implant is both less
scary and less useful than
you might think.**

BARCELONA (Reuters) - A man volunteered to be implanted with a microchip on a stage at a trade fair in Barcelona on Monday, and another man who had already undergone

Wirelessly Power
& Communicate

Continuous Sensing of Biomarkers & Tumors

Ultra Long-Lasting Drug Delivery

Technologies that can remotely power up & communicate
with **deep-tissue, batteryless, intelligent** micro-implants

[ACM SIGCOMM'18, ACM MobiCom'20]

Key Challenge:

Wireless signals die exponentially in the human body

Key Challenge:

Wireless signals die exponentially in the human body

Signals decay more than 1000x faster inside the body
than in air

Cannot power up batteryless sensor in deep tissues

How can we power and communicate with sensors in deep tissues despite tissue attenuation & complexity?

How can we power and communicate with sensors in deep tissues despite tissue attenuation & complexity?

Self-reconfiguring micro-implant

[ACM MobiCom '20]

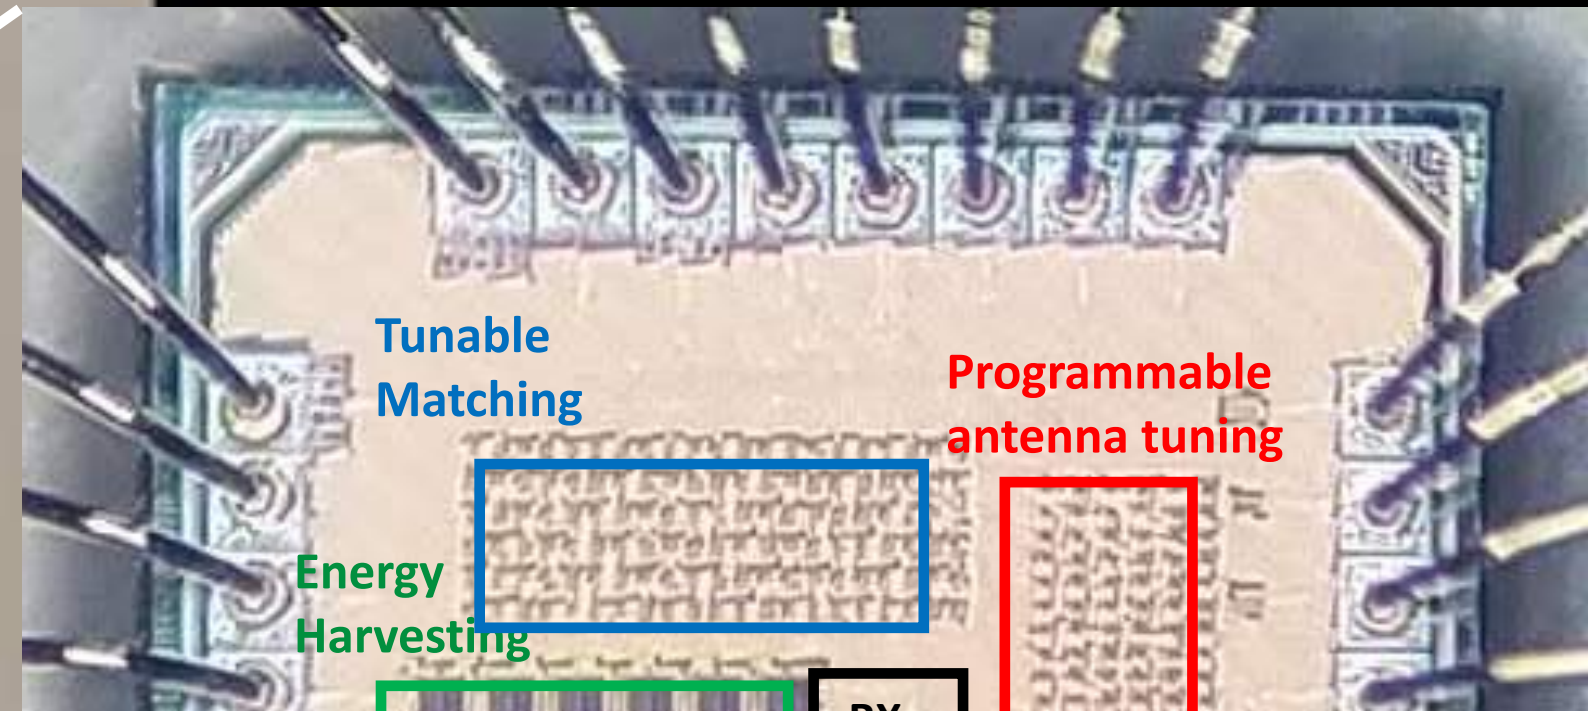

**Programmable Antenna
on Flexible Substrate**

Microchip

Magnified Die Micrograph

Micro-implant is wireless, batteryless, and intelligent:
consumes **350 nanoWatts**, throughput of **6Mbps**, & adapts to surrounding tissues

In-Vivo Evaluation with Living Animal

Female yorkshire pig weighing 85 kg

In-Vivo Evaluation with Living Animal
